

Building End-to-End Multi-Client Service Oriented Applications – *Angular Edition*

Module 11

The Car Rental Web Site

Part 2 – Web API & Single-Page-Applications

Highlights

- **The Web API**

- Base controller
- Attribute routing
- Pattern for writing operations (actions)
- Embracement of HTTP
- Error handling

- **Single-Page-Applications**

- One delivered view (from MVC)
- Several sub-views (HTML sections or templates)
- Angular retrieves & renders “sub-views”
- Can also use “div”-flipping
- Back-button support through push-state
- Offers the richest user experience (think Gmail)
